THE CARE PARTNER PROJECT

MEDICATION RECORD

FOR:_____ DATE:_____

Doctors and nurses will need details about any substances that could be in your loved one's system when they enter the hospital, as well as any allergies to anything. Even things taken in the recent past can still be working in your loved one's system. When it comes to cigarettes, alcohol or recreational drugs, no one will judge. Your loved one's medical team needs to know this information in order to prevent possible negative drug interactions and to be prepared for the possible effects of withdrawal.
